Standard Sewer Specifications for S/D and General System Additions

Dear Mrs. Santana :

The Tennessee Department of Environment and Conservation, Division of Water Pollution Control acknowledges receipt of three copies of your documents named Standard Sewer Specifications for S/D and General System Additions 2009.

Review of your standard sewer specifications shows that they are in conformance with our guidelines. Therefore, they have been stamped "APPROVED". This approval will remain in effect until June 26, 2012.

One copy of the standard specifications is being retained for our records and the remaining copies are being returned to you. If you have any questions please contact us at (615) 532-0625.

Sincerely,

A handwritten signature in black ink, appearing to read "Mahendra N. Upadhyaya".

INTRODUCTION

1. PURPOSE OF THE STANDARDS MANUAL

These Standards are guidelines for Developers, their Engineers and Contractors for the planning, design and construction of sanitary sewers, small wastewater pumping stations, and associated appurtenances within the City of Lebanon, Tennessee, Public Works Department, hereinafter identified as the “City of Lebanon”, service areas.

These Standards shall govern the construction materials and installation of wastewater collections systems that are, or will become, the responsibility of the City of Lebanon to operate and maintain as part of their system.

These standards are intended to meet or exceed the requirements of the State of Tennessee’s Department of Environment and Conservation (TDEC) and to aid the Engineer in his design of wastewater collection systems and wastewater lift stations. This design should incorporate the highest level of standards of practice and specify materials of highest quality identified in the technical specifications.

The Standards identify a single set of standards, criteria, submittal requirements and approval procedures to be used in the planning, design, and construction of projects within the City of Lebanon service area.

These Standards are not intended to serve as a step-by-step design and construction method nor can this manual address every situation that may arise. The application of sound engineering/surveying principles combined with the information contained herein is necessary to complete the planning, design, and construction for wastewater collection projects.
